

Launching a Thread Solutions

Launching a Thread Solutions

- The source code for the solutions is available as a downloadable resource
- The issue with the pass-by-move program is that reading a moved-from variable gives undefined behaviour. It may work in this case, but should not be relied on.

Thread function with pass by move

- Write a program with a thread that receives a string by move, and prints it out. The main() function then displays the value of the moved-from string.
- Use
 - A regular function
 - A functor
 - A lambda function
- Test your program for all three cases
- Are there any issues with this program?
 - Reading a moved-from variable gives undefined behaviour
